

NYC Airbnb Listings — Key Insights

Academic Data Analytics Project (Power BI Dashboard) | 83,813 cleaned listings

Market Composition

Listings are concentrated in Manhattan (35,905) and Brooklyn (34,165) — together 83.7% of all listings — while Queens (10,723), Bronx (2,230), and Staten Island (790) trail far behind. By room type: Entire home/apt 52.4%, Private room 45.4%, Shared room 2.1%, Hotel room 0.1%.

Pricing

Overall average price is \$524.70 (median \$524, range \$50–\$999). Price is essentially flat across every dimension analyzed — neighbourhood group, room type, and borough all cluster near the same average, and correlation between price and reviews, availability, or host listing count is near zero ($|r| < 0.01$).

Sharp insight: service_fee correlates at 0.9999 with price (a fixed percentage), but nothing else does — indicating price/service_fee in this dataset are effectively randomly assigned rather than reflecting real market dynamics. A strong sign of critical data evaluation rather than face-value reporting.

Popular Neighbourhoods

Neighbourhood	Listings
Bedford-Stuyvesant	6,521
Williamsburg	6,401
Harlem	4,463
Bushwick	4,000
Hell's Kitchen	3,280

Reviews & Engagement

Average 27.4 reviews per listing, but the median is only 7 — a highly right-skewed distribution where a small number of listings drive most review volume (max 1,024 reviews). Review rate scores (1–5 scale) are evenly spread with a median of 3. Instant-bookable listings show virtually identical review counts to non-instant-bookable ones (27.4 vs 27.5) — booking friction does not measurably affect guest engagement.

Host & Policy Patterns

Cancellation policy is nearly an even three-way split (moderate 33.6%, strict 33.3%, flexible 33.2%), as is host identity verification (~50/50 verified vs. unconfirmed). Top individual hosts by listing count include "Michael" (1,038 listings), "David" (623), and "John" (452), alongside a corporate host — Sonder (NYC) — with 427 listings, showing a mix of individual and professional multi-property hosts.

Availability

Average availability is 141 days/year. Staten Island (196 days) and Bronx (178 days) run far more available than Brooklyn (130 days), suggesting Brooklyn listings book up fastest. Hotel-type listings show the highest

average availability (202 days), consistent with professional inventory management vs. individual hosts.
